Our Services

Building robust infrastructure and public facilities to empower communities and drive sustainable development.

Civil Engineering & Transport Infrastructure

Expertise in the design and development of transport networks, including comprehensive civil engineering for roads, bridges, and highways.

Structural Engineering & Building Services

Detailed solutions in structural engineering, focusing specifically on reinforced concrete and structural steel, as well as professional building services.

Project & Contract Management

End-to-end oversight of engineering initiatives through dedicated project management, alongside the handling of contract documentation and administration.

Water & Sanitation Engineering

Expertise in the design and development of transport networks, including comprehensive civil engineering for roads, bridges, and highways.

For more information and quotation requests scan here:

Township & Community Development

Development of integrated township services covering roads, sanitation, and storm water infrastructure , in addition to executing community-based projects.

Specialized Public Facilities

Engineering and development of large-scale, high-traffic public infrastructure, including stadiums and sports facilities , as well as airports and border control facilities.

Infrastructure & Incident Management

The implementation and oversight of road and infrastructure management systems , coupled with specialized incident management systems.

Geographic Information Systems (GIS)

Utilizing GIS technology to support spatial mapping, data analysis, and overarching infrastructure planning.

Our Experience

Check out a few of our completed projects below!

Umgeni water

Competent and experienced service providers for provision of multidisciplinary professional services in the Engineering Profession

eThekwini Municipality

Expression of Interest for the panel of design consultants to provide design and supervising services for the provision of water and sanitation services on behalf of eThekwini Municipality over 3yrs

Public Works – KwaZulu Natal

Civil and Structural Engineers-Kloof High School:
Repairs & Renovations

Harry Gwala District Municipality

Appointment for a panel of 3 Consulting Engineers for the provision of Technical Support- for a period of 36 months JV

Department Public Works

Appointment of a multi-disciplinary entity to provide professional services for the Department of Health:
Design of a Orthotic and Prosthetic Centre at Ngwelezane Hospital JV

uMzimkhulu Local Municipality

Pool of Professional Service Providers

Rehabilitation Projects

Old Park to Ashburton Upgrade: Pavement Engineer – 5 km upgrade and rehabilitation (concrete pavements) for SANRAL – R900 million project

Lovu to Umlass Canal: Pavement Engineer – N2 – Lovu to Umlass Canal – 21 km upgrade and road rehabilitation project for SANRAL – R950 million

Various road rehabilitation projects for JRA – R10 million to R30 million project values

Maputo Road Development Corridor: Gladdesspruit Bridge

At the Gladdesspruit River Bridge, the N4 is currently a dual carriageway. The existing structure is 61 m long, having six spans of approximately 9.9 m. It was proposed to widen the bridge on the upstream side by 4.455 m, giving a 12 m wide carriageway with two 2.5 m shoulders. The deck would be widened by means of four precast concrete M3 beams with a 160 mm thick deck slab cast on permanent framework. The existing wall piers and the closed abutments would be extended. Traffic would be diverted onto the westbound carriageway to enable widening of the eastbound bridge to take place unhindered by traffic.

Trunk Road 19/5: Matatiele to Mount Fletcher, Eastern Cape (Department of Roads & Public Works)

This project involves the rehabilitation and resealing of 63 km of road. The works consist of rehabilitation of the first 23 km, including earthworks to replace and widen the pavement for shoulders, and resealing the full section of roadway with a Cape Seal.

Road Rehabilitation for SANRAL: National Route 2-22, Murchison to Marburg

This project entailed the rehabilitation of 11 km of single carriageway road, provision of climbing lanes, widening of shoulders, construction of a new Jersey concrete barrier wall, provision of taxi lay-bys, and upgrading of major and minor access routes.

National Route 2, Section 19 between Mzeke River and Mount Frere, Eastern Cape (SANRAL – Joint Venture)

This project entailed the rehabilitation of the existing road pavement, addition of new asphalt base and asphalt surfacing, provision of climbing lanes, improvement of selected intersections, replacement of fencing, repair and upgrading of the stormwater system, provision of concrete-lined drains, and repairs to bridges and box culverts.

More Infrastructure Projects

Routine Road Maintenance: Port Elizabeth & Keiskamma River

National Route 2 between Port Elizabeth and Keiskamma River, and National Route 10 between Nanacha and Olifantskop Pass – 3-year contract covering 200 km.

Concrete Inlay and Asphalt Rehabilitation on Main Road 82

This project involved the rehabilitation of 6 km of dual carriageway road, construction of 220 mm continuously reinforced concrete pavement (CRCP) in the slower lane, milling and replacing sections of the middle and fast lanes, and overlaying with 25 mm Stone Mastic Asphalt (SMA). (Project undertaken as a Joint Venture with VKE.)

Deep-water Port Infrastructure Development (Coega Development Corporation)

Upgrading of Neptune Road, along the existing N2, to dual carriageway standard and construction of a cloverleaf interchange and bridges. Neptune Road passing beneath the N2 interchange became a six-lane dual carriageway with a 5 m wide median and an additional collector-distributor road on each side.

Other Projects

- New Bridges and Widening for Department of Transport: Elandskop Stream Bridge
- Water Reticulation: Mfolweni Township
- Township Services: Marbleray Properties
- Greylands Housing Project: North Local Council
- Newlands East Shopping Centre
- Services: Empangeni Prison
